Policy
Commercial Members: Managed Care (HMO and POS), PPO, and Indemnity Medicare HMO BlueSM and Medicare PPO BlueSM Members

Coverage Guidelines: Outpatient Pediatric Pain Rehabilitation Centers services are covered as outlined by each Blue Cross benefit design or subscriber certificate.

Outpatient Pediatric Pain Rehabilitation Centers services are considered MEDICALLY NECESSARY when the following criteria are met:

Initial Review, All: (New episode, initial 15-day treatment)

- Clinical presentation, One:
  - Complex Regional Pain Syndrome (CRPS)/Reflex Sympathetic Dystrophy (RSD), All:
    - Failed an outpatient program consisting of pain medication management, physical and/or occupational therapy, and cognitive/behavioral therapy for a minimum of 90 days
    - Persistent pain and neurovascular symptoms that interfere with activities of daily living.
  - Chronic Daily Headaches, All:
    - Chronic headache lasting hours, or continuous
    - Headaches are of long duration (three months or longer)
    - 15 or more headache days per month
    - Headaches are not related to a specific underlying illness
    - Member has been treated by a pediatric neurologist and has not improved after at least eight weeks of outpatient pharmacotherapy
    - Able to tolerate >3 hours per day of therapy, five days per week.
• Age ≥7, ≤18

• Patient agrees and is able to participate in program

• Progressive therapy program, All:
  o Interdisciplinary program
  o Multiple treatment modalities for pain and functional restoration
  o Includes physical, occupational, and cognitive/behavioral therapy

• Goals, All:
  o Improve function and reduce limitation
  o Consistent follow-through with home treatment program

**Ongoing Review, All:**

• Clinical presentation, One:
  o Confirmed diagnosis of Complex Regional Pain Syndrome (CRPS)/Sympathetic Dystrophy (RSD)
  o Confirmed diagnosis of Chronic Daily Headaches

• Rehab potential based on prior level of function, with expectation for clinical or functional improvement

• Patient or caregiver is committed to program participation

• Continue teaching and evaluate knowledge retention for home Rx program

• Partial progress made in meeting treatment goals, both:
  o Improvement in function and reduction in limitations
  o Documented patient or caregiver adherence to home exercise program

**Discharge Review, One:**

• New onset, or worsening of Sx (symptoms) or findings, requires reassessment before continuing outpatient rehabilitation program

• Further improvement or integration of skills expected with patient or caregiver adherence to home Rx program

• Goals met, All:
  o Sx (symptoms) or findings, ≥ One:
    ▪ No longer present or new skill acquired
    ▪ Improved ability to manage limitations
  o Independent with home treatment program

• Functional plateau reached since last authorization

• Rehabilitation potential poor, ≥ One:
  o Chronic functional loss and maximal functional ability achieved
  o Lack of motivation or refusal to continue home therapy program
  o Unable to learn or participate in a home therapy program

**Prior Authorization Information**

Inpatient
For services described in this policy, precertification/preauthorization **is required** for all products if the procedure is performed **inpatient**.

**Outpatient**

For services described in this policy, see below for products where prior authorization **might be required** if the procedure is performed **outpatient**.

**How to Submit an Authorization Request?** Providers may send relevant clinical information to:

**Before services are rendered**
Blue Cross Blue Shield of Massachusetts Case Creation/Medical Policy
One Enterprise Drive Quincy, MA 02171
Tel: 1-800-327-6716
Fax: 1-888-282-0780

**For services already billed**
Blue Cross Blue Shield of Massachusetts Provider Appeals
P.O. Box 986065 Boston, MA 02298

**CPT Codes / HCPCS Codes / ICD Codes**

Inclusion or exclusion of a code does not constitute or imply member coverage or provider reimbursement. Please refer to the member’s contract benefits in effect at the time of service to determine coverage or non-coverage as it applies to an individual member.

Providers should report all services using the most up-to-date industry-standard procedure, revenue, and diagnosis codes, including modifiers where applicable.

The following codes are included below for informational purposes only; this is not an all-inclusive list.

The above medical necessity criteria **MUST** be met for the following codes to be covered for **Commercial Members: Managed Care (HMO and POS), PPO, Indemnity, Medicare HMO Blue and Medicare PPO Blue**:

**CPT Codes**

<tr>
<td>97161</td>
<td>Physical therapy evaluation: low complexity, requiring these components: A history with no personal factors and/or comorbidities that impact the plan of care; An examination of body system(s) using standardized tests and measures addressing 1-2 elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with stable and/or uncomplicated characteristics; and Clinical decision making of low complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 20 minutes are spent face-to-face with the patient and/or family.</td>
</tr>
<tr>
<td>97162</td>
<td>Physical therapy evaluation: moderate complexity, requiring these components: A history of present problem with 1-2 personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures in addressing a total of 3 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; An evolving clinical presentation with changing characteristics; and Clinical decision making of moderate complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 30 minutes are spent face-to-face with the patient and/or family.</td>

<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>97163</td>
<td>Physical therapy evaluation: high complexity, requiring these components: A history of present problem with 3 or more personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures addressing a total of 4 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with unstable and unpredictable characteristics; and Clinical decision making of high complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 45 minutes are spent face-to-face with the patient and/or family.</td>
</tr>
<tr>
<td>97164</td>
<td>Re-evaluation of physical therapy established plan of care, requiring these components: An examination including a review of history and use of standardized tests and measures is required; and Revised plan of care using a standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 20 minutes are spent face-to-face with the patient and/or family.</td>
</tr>
<tr>
<td>97165</td>
<td>Occupational therapy evaluation, low complexity, requiring these components: An occupational profile and medical and therapy history, which includes a brief history including review of medical and/or therapy records relating to the presenting problem; An assessment(s) that identifies 1-3 performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of low complexity, which includes an analysis of the occupational profile, analysis of data from problem-focused assessment(s), and consideration of a limited number of treatment options. Patient presents with no comorbidities that affect occupational performance. Modification of tasks or assistance (eg, physical or verbal) with assessment(s) is not necessary to enable completion of evaluation component. Typically, 30 minutes are spent face-to-face with the patient and/or family.</td>
</tr>
<tr>
<td>97166</td>
<td>Occupational therapy evaluation, moderate complexity, requiring these components: An occupational profile and medical and therapy history, which includes an expanded review of medical and/or therapy records and additional review of physical, cognitive, or psychosocial history related to current functional performance; An assessment(s) that identifies 3-5 performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of moderate analytic complexity, which includes an analysis of the occupational profile, analysis of data from detailed assessment(s), and consideration of several treatment options. Patient may present with comorbidities that affect occupational performance. Minimal to moderate modification of tasks or assistance (eg, physical or verbal) with assessment(s) is necessary to enable patient to complete evaluation component. Typically, 45 minutes are spent face-to-face with the patient and/or family.</td>
</tr>
<tr>
<td>97167</td>
<td>Occupational therapy evaluation, high complexity, requiring these components: An occupational profile and medical and therapy history, which includes review of medical and/or therapy records and extensive additional review of physical, cognitive, or psychosocial history related to current functional performance; An assessment(s) that identifies 5 or more performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of high analytic complexity, which includes an analysis of the patient profile, analysis of data from comprehensive assessment(s), and consideration of multiple treatment options. Patient presents with comorbidities that affect occupational performance. Significant modification of tasks or assistance (eg, physical or verbal) with assessment(s) is necessary to enable patient to complete evaluation component. Typically, 60 minutes are spent face-to-face with the patient and/or family.</td>
</tr>
<tr>
<td>97168</td>
<td>Re-evaluation of occupational therapy established plan of care, requiring these components: An assessment of changes in patient functional or medical status with revised plan of care; An update to the initial occupational profile to reflect changes in condition or environment that affect future interventions and/or goals; and A revised plan of care. A formal reevaluation is performed when there is a documented change in</td>

</table>
A Pediatric Pain Rehabilitation Center is a facility where patients undergo intensive treatment for chronic pain. An interdisciplinary approach to pain management is used, which includes physical therapy, occupational therapy, cognitive/behavioral therapy, and medication management. Complex Regional Pain Syndrome (CRPS), formerly known as Reflex Sympathetic Dystrophy (RSD), is a condition characterized by intense, burning pain that can affect multiple areas of the body, but most often affects the hands, arms, legs, and feet. Other characteristics include stiffness, swelling, and discoloration of the affected body part.

There are two types of CRPS. Type 1 follows an illness or injury that does not directly damage the nerve area. Type 2 follows an illness or injury with distinctive nerve damage. The exact cause of CRPS is unknown.

Chronic Daily Headache is a condition when headaches occur for more than four hours per day, with 15 headache days per month, over a period of three consecutive months without an underlying illness or disease causing the headache. Headache pain is generally severe, intermittent, and migraine-like. There are four diagnostic categories: transformed migraine; chronic tension-type; new daily, persistent headache; and hemicranias continua. Associated symptoms include sleep disturbance, pain at other sites, dizziness, and psychiatric comorbidity. Medication overuse is often a contributor.
