Pharmacy Medical Policy
Oncology Drugs (Oral and Subcutaneous)

Policy Number: 409
BCBSA Reference Number: None

Policy
Commercial Members: Managed Care (HMO and POS), PPO, and Indemnity

Note: All requests for outpatient retail pharmacy for indications listed and not listed on the medical policy guidelines may be submitted to BCBSMA Clinical Pharmacy Operations by completing the Prior Authorization Form on the last page of this document. Physicians may also call BCBSMA Pharmacy Operations department at (800)366-7778 to request a prior authorization/formulary exception verbally. Patients must have pharmacy benefits under their subscriber certificates.

Prior Authorization Information

Policy applies to Commercial Members:
- Managed Care (HMO and POS),
- PPO and Indemnity
- MEDEX with Rx plan
- Managed Major Medical with Custom BCBSMA Formulary
- Comprehensive Managed Major Medical with Custom BCBSMA Formulary
- Managed Blue for Seniors with Custom BCBSMA Formulary

Pharmacy Operations:
Tel: 1-800-366-7778
Fax: 1-800-583-6289

To request for coverage: Providers may call, fax, or mail the attached form (Formulary Exception/Prior Authorization form) to the address below.

Blue Cross Blue Shield of Massachusetts
Pharmacy Operations Department
25 Technology Place
Hingham, MA 02043

Individual Consideration: Policy for requests that do not meet clinical criteria of this policy, see section labeled Individual Consideration.
Please refer to the chart below for the formulary and step status of the medications affected by this policy.

# Solution.

**We may cover Alecensa ® (alectinib) for the treatment of patients with metastatic non-small cell lung cancer (NSCLC) when ALL of the following criteria are met:**
- ALK-Positive mutation as determined by an FDA approved test

**We may cover Ayvakit ™ (avapritinib) for the treatment of adults when ALL of the following criteria are met:**
- PDGFRA Exon 18 Mutation-Positive Unresectable or Metastatic Gastrointestinal Stromal Tumor (GIST), including PDGFRA D842V mutations, OR
- For the treatment of adult patients with indolent systemic mastocytosis (ISM), OR
- Advanced Systemic Mastocytosis (AdvSM)
  1. AdvSM includes patients with aggressive systemic mastocytosis (ASM), systemic mastocytosis with an associated hematological neoplasm (SM-AHN), and mast cell leukemia (MCL)

**We may cover Alunbrig ™ (brigatinib) the treatment of adult patients with anaplastic lymphoma kinase (ALK)-positive metastatic non-small cell lung cancer (NSCLC) when ALL of the following criteria are met:**
- Susceptible ALK genetic mutation confirmed by an FDA test

**We may cover Balversa ® (erdafitinib) the treatment of adult (18 years of age or older) patients with locally advanced or metastatic urothelial carcinoma when ALL of the following criteria are met:**
- Susceptible fibroblast growth factor receptors genetic alterations type 2 or type 3 (FGFR3 or FGFR2) confirmed by an FDA test, AND
- Progressed during or following at least one line of prior platinum-containing chemotherapy, including within 12 months of neoadjuvant or adjuvant platinum-containing chemotherapy.

**We may cover Braftovi ™ (encorafenib) for the treatment of patients when ALL of the following criteria are met:**
• Diagnosis of unresectable or metastatic melanoma, **AND**
• BRAF V600E or V600K mutation as determined by an FDA approved test, **AND**
• Used in combination with binimetinib (Mektovi™)

OR

• Diagnosis of metastatic colorectal cancer (CRC), **AND**
• Used in combination with cetuximab (Erbitux®), **AND**
• BRAF V600E mutation, as detected by an FDA-approved test, **AND**
• after prior therapy

**We may cover Copiktra™ (duvelisib)** for the treatment of adult patients with relapsed or refractory Chronic Lymphocytic Leukemia (CLL), or Small Lymphocytic Lymphoma (SLL) when **ALL** of the following criteria are met:
• Age 18 years of age or older, **AND**
• Documented use of at least two prior therapies

**We may cover Cotellic™ (cobimetinib)** for the treatment of patients only with unresectable or metastatic melanoma when **ALL** of the following criteria are met:
• BRAF V600E or V600K mutation as determined by an FDA approved test, **AND**
• Used in combination with vemurafenib.

**We may cover erlotinib** for the first-line treatment of patients with metastatic non-small cell lung cancer (NSCLC) with epidermal growth factor receptor (EGFR) exon 19 deletion or exon 21 L858R substitution mutations as detected by an FDA-approved test when **ALL** of the following criteria are met:
• The patient has a documented diagnosis of NSCLC **AND**
• The patient has either Exon 19 Deletion or Exon 21 L858R Substitution confirmed by an FDA test

OR

**We may cover erlotinib** for the first-line treatment of patients with locally advanced, unresectable or metastatic pancreatic cancer.

**Tarceva** (erlotinib) may be covered if the member has tried and failed generic erlotinib.

**We may cover Exkivity® (mobocertinib)** for locally advanced or metastatic non-small cell lung cancer (NSCLC) when **ALL** of the following criteria are met:
• Progressed on or after platinum-based chemotherapy, **AND**
• epidermal growth factor receptor (EGFR) exon 20 insertion mutation detected by an FDA-approved test.

**We may cover Farydak® (Panobinostat)** a histone deacetylase inhibitor when **ALL** of the following criteria are met:
• is indicated for the treatment of patients with multiple myeloma who have received at least 2 prior regimens, **AND**
• including, bortezomib and an immunomodulatory agent, **AND**
• Used in combination with bortezomib and dexamethasone.

**We may cover Gavreto™ (pralsetinib)** for the treatment when **ALL** of the following criteria are met:
• Age 18 years of age or older, **AND**
- Confirmed diagnosis of metastatic RET fusion-positive non-small cell lung cancer (NSCLC)
- Age 12 years of age or older, AND
- Confirmed diagnosis of advanced or metastatic RET-mutant medullary thyroid cancer (MTC) who require systemic therapy
- Age 12 years of age or older, AND
- Confirmed diagnosis of advanced or metastatic RET fusion-positive thyroid cancer, AND
- requires systemic therapy and who are radioactive iodine-refractory

We may cover Gilotrif ® (afatinib) for the first-line treatment of patients with metastatic non-small cell lung cancer (NSCLC) whose tumors have non-resistant epidermal growth factor receptor (EGFR) mutations as detected by an FDA-approved test when ALL of the following criteria are met:
- The patient has a documented diagnosis of NSCLC, AND
- The patient has epidermal growth factor receptor (EGFR) mutations confirmed by an FDA test.

We may cover Ibrance ™ (palbociclib) for the treatment of HR-positive, HER2-negative advanced or metastatic breast cancer as indicated in its FDA approved label when used in combination with cancer when ALL of the following criteria are met:
- an aromatase inhibitor as initial endocrine-based therapy in postmenopausal women or in men, OR
- fulvestrant in patients with disease progression following endocrine therapy.

We may cover Idhifa ® (enasidenib) for the treatment of adult patients with relapsed or refractory acute myeloid leukemia (AML) when ALL of the following criteria are met:
- Age 18 years of age or older, AND
- An isocitrate dehydrogenase-2 (IDH2) mutation as determined by an FDA approved test

We may cover Iressa ® (gefitinib) for the first-line treatment of patients with metastatic non-small cell lung cancer (NSCLC) with epidermal growth factor receptor (EGFR) exon 19 deletion or exon 21 L858R substitution mutations as detected by an FDA-approved test when ALL of the following criteria are met:
- The patient has a documented diagnosis of NSCLC, AND
- The patient has either Exon 19 Deletion or Exon 21 L858R Substitution confirmed by an FDA test.

We may cover Jaypirca ™ (pirtobrutinib) for the treatment of patients with relapsed or refractory mantle cell lymphoma (MCL) when ALL of the following criteria is met:
- Age 18 years of age or older, AND
- Documentation of histologically confirmed mantle cell lymphoma (MCL), AND
- The Patient has received at least two prior systemic therapies, one of which was a BTK inhibitor.

We may cover Kisqali ® (ribociclib) for the treatment of HR-positive, HER2-negative advanced or metastatic breast cancer when ALL of the following criteria are met:
- Used in Combination with an aromatase inhibitor for the treatment of pre/perimenopausal or postmenopausal women with hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative advanced or metastatic breast cancer, as initial endocrine-based therapy
- Used in Combination with fulvestrant for the treatment of postmenopausal women with HR-positive, HER2-negative advanced or metastatic breast cancer, as initial endocrine-based therapy or following disease progression on endocrine therapy

We may cover Kisqali ® Femara Co-Pack (letrozole and ribociclib) for the treatment of initial endocrine-based therapy for HR-positive, HER2-negative advanced or metastatic breast cancer when ALL of the
following criteria are met:

- Patient is a pre/perimenopausal or Postmenopausal woman

**We may cover Lenvima™ (Lenvatinib) for the treatment of:**
- Locally recurrent or metastatic, progressive, radioactive iodine-refractory differentiated thyroid cancer, OR
- Advanced renal cell carcinoma (RCC) in combination with Everolimus following one prior anti-angiogenic therapy, OR
- Unresectable hepatocellular carcinoma (HCC), OR
- In combination with pembrolizumab (Keytruda®), is indicated for the treatment of patients with advanced endometrial carcinoma that is not microsatellite instability-high (MSI-H) or mismatch repair deficient (dMMR), who have disease progression following prior systemic therapy and are not candidates for curative surgery or radiation. Documentation required for mismatch repair deficient (MMR) as detected by an FDA approved test.

**We may cover Krazati™ (adagrasib) for the treatment of** patients with *KRAS G12C*-mutated locally advanced or metastatic non-small cell lung cancer (NSCLC) when **ALL** of the following criteria is met:
- Age 18 years of age or older, AND
- Documentation of *KRAS G12C* mutation as detected by an FDA approved test, AND
- The Patient has received at least one prior systemic therapy

**We may cover Lorbrerna® (lorlatinib) for the treatment of patients with anaplastic lymphoma kinase (ALK)-positive metastatic non-small cell lung cancer (NSCLC) or as first-line anaplastic lymphoma kinase (ALK)-positive non-small cell lung cancer (NSCLC) when **ALL** of the following criteria is met:
- Documentation of ALK-positive NSCLC as detected by an FDA approved test

**We may cover Lumakras™ (sotorasib) for the treatment of patients with *KRAS G12C*-mutated locally advanced or metastatic non-small cell lung cancer (NSCLC) when **ALL** of the following criteria is met:
- Documentation of KRAS G12C mutation as detected by an FDA approved test, AND
- The Patient has received at least one prior systemic therapy.

**We may cover Lytgobi® (futibatinib) for the treatment of patients with previously treated, unresectable, locally advanced, or metastatic intrahepatic cholangiocarcinoma when **ALL** of the following criteria are met:
- Age 18 years of age or older, AND
- fibroblast growth factor receptor 2 (FGFR2) gene fusion as determined by an FDA approved test

**We may cover Mekinist™ (trametinib) for treatment when **ALL** of the following criteria are met:**
- Safety and effectiveness have not been established in pediatric patients, AND
- as a single agent in BRAF-inhibitor treatment-naïve patients or in combination with dabrafenib (Tafinlar®), for the treatment of patients with unresectable or metastatic melanoma with BRAF V600E or V600K mutations, as detected by an FDA-approved test.

**OR**
- In combination with dabrafenib (Tafinlar®), for the adjuvant treatment of patients with melanoma with BRAF V600E or V600K mutations, as detected by an FDA-approved test, and involvement of lymph node(s), following complete resection, OR
- In combination with dabrafenib (Tafinlar®), for the treatment of patients with metastatic non-small cell lung cancer (NSCLC) with BRAF V600E mutation as detected by an FDA-approved test, OR
- In combination with dabrafenib (Tafinlar®), for the treatment of patients with locally advanced or metastatic anaplastic thyroid cancer (ATC) with BRAF V600E mutation and with no satisfactory locoregional treatment options, OR
- MEKINIST is indicated, in combination with dabrafenib (Tafinlar®), for the treatment of adult and pediatric patients 6 years of age and older with unresectable or metastatic solid tumors with BRAF V600E mutation who have progressed following prior treatment and have no satisfactory alternative treatment options, OR
- In combination dabrafenib (Tafinlar®), for previously treated inoperable or metastatic solid tumors that have BRAF V600E mutations in patients ≥ 6 years old who no longer have other remaining therapy choices.
We may cover **Mektovi** ® (binimetinib) for the treatment of patients only with unresectable or metastatic melanoma when **ALL** of the following criteria are met:
- BRAF V600E or V600K mutation as determined by an FDA approved test, **AND**
- Used in combination with encorafenib (Braftovi™).

We may cover **Orserdu** ® (elacestrant) for the treatment of adults with estrogen receptor (ER)-positive, human epidermal growth factor receptor 2 (HER2)-negative, ESR1-mutated advanced or metastatic breast cancer when **ALL** of the following criteria are met:
- Confirmed diagnosis estrogen receptor (ER)-positive, human epidermal growth factor receptor 2 (HER2)-negative, ESR1-mutated advanced or metastatic breast cancer, **AND**
- Age 18 years of age or older, **AND**
- Patient must have disease progression following at least one line of endocrine therapy

We may cover **Pemazyre** ™ (pemigatinib) for the treatment of previously treated, unresectable locally advanced or metastatic cholangiocarcinoma with when **ALL** of the following criteria are met:
- Confirmed diagnosis of unresectable locally advanced or metastatic cholangiocarcinoma, **AND**
- a fibroblast growth factor receptor 2 (FGFR2) fusion or other rearrangement as detected by an FDA-approved test, **AND**
- Document previous treatment
**OR**
- Confirmed diagnosis of relapsed or refractory myeloid/lymphoid neoplasms (MLNs), **AND**
- a fibroblast growth factor receptor 2 (FGFR2) fusion or other rearrangement as detected by an FDA-approved test.

We may cover **Piqray** ® (alpelisib) for the treatment of postmenopausal women, and men, with hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative, PIK3CA-mutated, advanced or metastatic breast cancer when **ALL** of the following criteria are met:
- Following progression on or after an endocrine-based regimen, **AND**
- Catalytic alpha-subunit of phosphatidylinositol-3-kinase (PIK3CA) mutation is present as detected from an FDA approved test, **AND**
- Used in combination with fulvestrant (Faslodex ™)

We may cover **Retevmo** ™ (selpercatinib) for the treatment when **ALL** of the following criteria are met:
- Age 18 years of age or older, **AND**
- Confirmed diagnosis of metastatic RET fusion-positive non-small cell lung cancer (NSCLC)
**OR**
- Age 12 years of age or older, **AND**
- Confirmed diagnosis of advanced or metastatic RET-mutant medullary thyroid cancer (MTC) who require systemic therapy
**OR**
- Age 12 years of age or older, **AND**
- Confirmed diagnosis of advanced or metastatic RET fusion-positive thyroid cancer, **AND**
- requires systemic therapy and who are radioactive iodine-refractory
**OR**
- Age 18 years of age or older, **AND**
- Confirmed diagnosis of locally advanced or metastatic solid tumors with a RET gene fusion, **AND**
- Has progressed on or following prior systemic treatment or who have no satisfactory alternative treatment options.

We may cover **Rezlidhia** ™ (olutasidenib) for the treatment of adult patients with relapsed or refractory acute myeloid leukemia (AML) with a susceptible isocitrate dehydrogenase-1 (IDH1) mutation when **ALL** of the following criteria is met:
- Age 18 years of age or older, **AND**
- Documentation of isocitrate dehydrogenase-1 (IDH1) mutation as detected by an FDA approved test
We may cover Rozlytrek™ (entrectinib) for the treatment when ALL the following criteria are met:

- The patient is 12 years of age and older with solid tumors and has a neurotrophic receptor tyrosine kinase (NTRK) gene fusion without a known acquired resistance mutation as determined by an FDA approved test, AND
- The patient is metastatic or where surgical resection is likely to result in severe morbidity, AND
- The patient has no satisfactory alternative treatments or that have progressed following treatment.

OR
- The patient is an adult with metastatic non-small cell lung cancer (NSCLC) whose tumors are ROS1-positive as determined by an FDA approved test

We may cover Rydapt® (midostaurin) when ALL of the following criteria are met:

- A diagnosis of acute myeloid leukemia (AML) that is FLT3 mutation-positive, AND
- Documentation of the above diagnosis from an FDA approved test, AND
- Used in combination with standard cytarabine and daunorubicin induction and cytarabine consolidation.

We may cover Scemblix™ (asciminib) when ALL of the following criteria are met:

- Age 18 years of age or older, AND
- Philadelphia chromosome-positive chronic myeloid leukemia (Ph+ CML) in chronic phase (CP), previously treated with two or more tyrosine kinase inhibitors (TKIs)

OR
- Ph+ CML in CP with the T315I mutation.

We may cover Tabrecta™ (capmatinib) when ALL of the following criteria are met:

- Age 18 years of age or older, AND
- Confirmed Diagnosis of metastatic non-small cell lung cancer (NSCLC), AND
- Documentation of a mutation that leads to mesenchymal-epithelial transition (MET) exon 14 skipping from an FDA approved test.

We may cover Tagrisso® (osimertinib) for the first-line treatment of patients with metastatic non-small cell lung cancer (NSCLC) with epidermal growth factor receptor (EGFR) exon 19 deletion or exon 21 L858R substitution mutations as detected by an FDA-approved test when ALL of the following criteria are met:

- The patient has a documented diagnosis of NSCLC, AND
- The patient has either Exon 19 Deletion or Exon 21 L858R Substitution confirmed by an FDA test.

OR
- The patient has a documented diagnosis of NSCLC, AND
- The patient has EGFR T790M mutation-positive, as confirmed by an FDA test, AND
- The patient has progressed on or after EGFR tyrosine kinase inhibitor (TKI) therapy
We may cover Tepmetko® (tepotinib) for the treatment of adult patients with metastatic non-small cell lung cancer (NSCLC) harboring mesenchymal-epithelial transition (MET) exon 14 skipping alterations when ALL of the following criteria are met:

- Age 18 years of age or older, AND
- Confirmed Diagnosis of metastatic non-small cell lung cancer (NSCLC), AND
- Documentation of a mutation that leads to mesenchymal-epithelial transition (MET) exon 14 skipping from an FDA approved test.

We may cover Tibsovo® (ivosidenib) for the treatment of patients when ALL of the following criteria are met:

- in combination with azacitidine (Vidaza) or as monotherapy, AND
- Diagnosis of newly diagnosed acute myeloid leukemia (AML), AND
- Susceptible isocitrate dehydrogenase-1 (IDH1) mutation as detected by an FDA-approved test, AND
- patient is ≥ 75 years old or who have comorbidities which preclude use of intensive induction chemotherapy.

OR

- Diagnosis of relapsed or refractory acute myeloid leukemia (AML), AND
- Susceptible isocitrate dehydrogenase-1 (IDH1) mutation as detected by an FDA-approved test, AND
- relapsed or refractory to previous treatments, AND
- Patient is ≥ 18 years of Age.

OR

- Diagnosis of locally advanced or metastatic cholangiocarcinoma, AND
- Susceptible isocitrate dehydrogenase-1 (IDH1) mutation as detected by an FDA-approved test, AND
- Patient is ≥ 18 years of Age.

We may cover Truseltiq® (infigratinib) for the treatment of adults with previously treated, unresectable locally advanced or metastatic cholangiocarcinoma with a fibroblast growth factor receptor 2 (FGFR2) fusion or other rearrangement when ALL of the following criteria are met:

- Documentation of fibroblast growth factor receptor 2 (FGFR2) mutation as detected by an FDA approved test

We may cover Verzenio™ (abemaciclib) when ALL of the following criteria are met:

- Used with endocrine therapy (tamoxifen or an aromatase inhibitor) for the adjuvant treatment of adult patients with hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative, node-positive, early breast cancer at high risk of recurrence, OR
- Used as initial endocrine-based therapy for postmenopausal women with hormone receptor-positive (HR+), HER-2 negative, advanced metastatic breast cancer, when used in combination with an aromatase inhibitor, OR
- Used in combination with fulvestrant for the treatment of women with hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative advanced or metastatic breast cancer with disease progression following endocrine therapy, OR
- Used as monotherapy for the treatment of adult patients with HR-positive, HER2-negative advanced or metastatic breast cancer with disease progression following endocrine therapy and prior chemotherapy in the metastatic setting

We may cover Vitrakvi® (larotrectinib) for the treatment of adult and pediatric patients with solid tumors when ALL of the following criteria are met:

- The patient has a neurotrophic receptor tyrosine kinase (NTRK) gene fusion without a known acquired resistance mutation as determined by an FDA approved test, AND
- The patient is metastatic or where surgical resection is likely to result in severe morbidity, AND
- The patient has no satisfactory alternative treatments or that have progressed following treatment.

We may cover Vizimpro® (dacomitinib) for the first-line treatment of patients with metastatic non-small cell lung cancer (NSCLC) with epidermal growth factor receptor (EGFR) exon 19 deletion or exon 21 L858R substitution mutations as detected by an FDA-approved test when ALL of the following criteria are met:

- The patient has a documented diagnosis of NSCLC, AND
- The patient has either Exon 19 Deletion or Exon 21 L858R Substitution confirmed by an FDA test
We may cover Vonjo™ (pacritinib) for intermediate or high-risk primary or secondary (post-polycythemia vera or post-essential thrombocythemia) myelofibrosis (MF) with a platelet count below 50 x 10⁹/L when ALL of the following criteria are met:

- The patient has a documented diagnosis of myelofibrosis (MF), AND
- The patient has a platelet count below 50 x 10⁹/L

We may cover Xalkori® (crizotinib) or when ALL of the following criteria are met²:

- Age 18 years of age or older for the treatment of locally advanced or metastatic nonsmall cell lung cancer (NSCLC) AND Documentation of ROS1-positive metastatic NSCLC as detected by an FDA approved test,

OR

- Age 1 years of age for older for the treatment of relapsed or refractory, systemic anaplastic large cell lymphoma (ALCL) that is anaplastic lymphoma kinase positive (ALK+) AND Documentation of ALK-positive as detected by an FDA approved test.

We may cover Xospata® (gilteritinib) for the treatment of patients when ALL of the following criteria are met¹:

- Diagnosis of relapsed or refractory acute myeloid leukemia (AML), AND
- Documentation of FLT3 mutation detected by an FDA-approved test, AND
- Age 18 years of age or older

We may cover Zelboraf™ (vemurafenib) for the treatment of patients when ALL of the following criteria are met¹:

- Diagnosis of unresectable melanoma, metastatic melanoma OR Erdheim-Chester Disease (ECD), AND
- Documentation of BRAF V600E mutation detected by an FDA-approved test, AND
- Safety and efficacy in pediatric patients below the age of 18 have not been established.

We may cover Zykdia™ (ceritinib) ZYKADIA is indicated for the treatment of patients with metastatic non-small cell lung cancer (NSCLC) whose tumors are anaplastic lymphoma kinase (ALK)-positive as detected by an FDA-approved test when ALL of the following criteria are met:

- Age 18 years of age or older, AND
- The tumors are anaplastic lymphoma kinase (ALK)-positive.

We may cover ZYDELIG® (idelalisib) as indicated in its FDA approved label:

- Relapsed Chronic Lymphocytic Leukemia -- Zydelig is indicated, in combination with rituximab, for the treatment of patients with relapsed chronic lymphocytic leukemia (CLL) for whom rituximab alone would be considered appropriate therapy due to other co-morbidities, OR
- Relapsed Small Lymphocytic Lymphoma -- Zydelig is indicated for the treatment of patients with relapsed small lymphocytic lymphoma (SLL) who have received at least two prior systemic therapies.

We do not cover the above drugs for other conditions not listed above.

Other Information
Blue Cross Blue Shield of Massachusetts (BCBSMA*) members (other than Medex®; Blue MedicareRx, Medicare Advantage plans that include prescription drug coverage) will be required to fill their prescriptions for the above medications at one of the providers in our retail specialty pharmacy network, see link below:

Link to Specialty Pharmacy List
Individual Consideration

Our medical policies are written for most people with a given condition. Each policy is based on peer reviewed clinical evidence. We also take into consideration the needs of atypical patient populations and diagnoses.

If the coverage criteria outlined is unlikely to be clinically effective for the prescribed purpose, the health care provider may request an exception to cover the requested medication based on an individual's unique clinical circumstances. This is also referred to as "individual consideration" or an "exception request."

Some reasons why you may need us to make an exception include: therapeutic contraindications; history of adverse effects; expected to be ineffective or likely to cause harm (physical, mental, or adverse reaction).

To facilitate a thorough and prompt review of an exception request, we encourage the provider to include additional supporting clinical documentation with their request. This may include:

- Clinical notes or supporting clinical statements.
- The name and strength of formulary alternatives tried and failed (if alternatives were tried) and specifics regarding the treatment failure, if applicable.
- Clinical literature from reputable peer reviewed journals.
- References from nationally recognized and approved drug compendia such as American Hospital Formulary Service® Drug Information (AHFS-DI), Lexi-Drug, Clinical Pharmacology, Micromedex or Drugdex®; and
- References from consensus documents and/or nationally sanctioned guidelines.

Providers may call, fax or mail relevant clinical information, including clinical references for individual patient consideration, to:

Blue Cross Blue Shield of Massachusetts
Pharmacy Operations Department
25 Technology Place
Hingham, MA 02043
Phone: 1-800-366-7778
Fax: 1-800-583-6289

*We may also use prescription claims records to establish prior use of formulary alternatives or to show if step therapy criteria has been met. We will require the provider to share additional information when prescription claims data is either not available or the medication fill history fails to establish use of preferred formulary medications or that step therapy criteria has been met.*
