**Colorectal cancer screening**

CT colonography (CTC) is indicated in ANY of the following scenarios:

- Screening CT colonography is indicated for average risk individuals* as an alternative to conventional colonoscopy at 5-year intervals, beginning at age 45

*Average risk:

- No personal history of colonic adenoma, serrated sessile polyp (SSP), or colorectal cancer (CRC)
- No personal history of inflammatory bowel disease
- Negative first-degree family history for CRC, confirmed advanced adenoma (i.e., high-grade dysplasia, ≥ 1 cm, villous or tubulovillous histology or an advanced SSP)

**Explanation of change**

Alignment with updated USPSTF recommendation

**Pancreatic cancer screening**

Annual CT or MRI (preferred) Abdomen is indicated as an alternative to endoscopic ultrasound in ANY of the following scenarios:

- Peutz-Jeghers syndrome (LKB1/STK11 mutations), starting at age 40
- Familial Atypical Multiple Melanoma and Mole syndrome (FAMMM; CDKN2A, p16 mutation), starting at age 40
- BRCA1, PALB2, ATM, or MLH1/MSH2/MSH6 (Lynch syndrome) gene mutation and at least one first degree relative (FDR) with pancreatic
cancer, starting at age 45 or 10 years earlier than the youngest affected relative
- BRCA2 gene mutation with EITHER of the following, starting at age 45 or 10 years earlier than the youngest affected relative:
  - At least one FDR with pancreatic cancer
  - At least two blood relatives with pancreatic cancer
- FDR and at least one other blood relative with pancreatic cancer, starting at age 50 or 10 years earlier than the youngest affected relative

**Explanation of change**
- Addition of age threshold specification by scenario from CAPS Consortium
- Restructure of indicated scenarios for operational clarification

**MRI pelvis**
Surveillance: Indicated for rectal cancer treated with transanal local excision alone only **Explanation of change**
- MRI Pelvis - NCCN evidence block alignment for surveillance of rectal cancer (2A recommendation)

**Esophageal and Gastroesophageal Junction Cancers FDG-PET/CT**
Management: Indicated in ANY of the following scenarios:
- Radiation planning for preoperative or definitive treatment only
- Single assessment of response to chemoradiation (as definitive treatment or prior to surgery) when performed at least 5 weeks after completion of therapy
- Standard imaging cannot be performed or is nondiagnostic for recurrent or progressive disease

**Explanation of change**
- PET clarification: Post chemoradiation imaging limited to single treatment response assessment (not ongoing)

**Hepatobiliary Cancer**
MRI abdomen with or without MRCP
Diagnostic Workup and Diagnosis: Indicated for EITHER of the following scenarios:
- Known cirrhosis or hepatitis B, with positive or rising serum alpha fetoprotein (AFP)*
- Documented hepatobiliary cancer

**Explanation of change**
- MRI Abdomen +/- MRCP – NCCN alignment for positive or rising AFP in patients undergoing HCC screening (2A recommendation)

**Gastrointestinal stromal tumors (GIST)**
FDG-PET/CT
Management: Indicated in EITHER of the following scenarios:
- Assess treatment response following completion of neoadjuvant chemotherapy
- Standard imaging cannot be performed or is nondiagnostic for recurrent or progressive disease

**Explanation of change**
- Addition of management scenario in alignment with NCCN (use of PET for ambiguous standard imaging findings)

**Effective November 7th 2021:**
Transplant-related imaging
Advanced imaging is considered medically necessary in the following scenarios:
• For living donors, a single pre-transplant evaluation
• For patients on the transplant waiting list for liver transplantation, annual surveillance
• Evaluation of suspected post-transplant complications Note: For patients on the transplant list but who have not undergone transplantation and who have a change in clinical condition, please refer to the applicable sign- or symptom-based indication.

**IMAGING STUDY**
• CT abdomen or CT abdomen/pelvis
• MRI abdomen as an alternative to CT abdomen for surveillance in patients on the waiting list for liver transplantation

**Explanation of change**
New indication for transplant-related imaging

---

**Policies with Coverage Updates in the Past 12 Months**

Policy clarified to include the following criteria: Has failed other non-surgical approaches to long-term weight loss. These approaches (i.e., diet and exercise plans, behavioral changes, etc.) and duration are up to the surgeon’s discretion.

Special Foods: Special Infant Formula, Enteral Formula, Ketogenic Diet for Seizures and Formula Infusion Pumps (304)

Effective 2/2021: Updated to add coverage for Relizorb ® to the policy.

AIM guideline: Abdomen and Pelvic Imaging (930)

Effective February 9, 2020:
- Foreign body (Pediatric only), Gastrointestinal bleeding, Henoch-Schonlein purpura, Hematoma or hemorrhage – intracranial or extracranial, Perianal fistula/abscess (fistula in ano), Ascites, Biliary tract dilatation or obstruction , Cholecystitis, Choledocholithiasis, Focal liver lesion, Hepatomegaly, Jaundice, Azotemia, Adrenal mass, indeterminate, Hematuria, Renal mass, Urinary tract calculi, Adrenal hemorrhage, Adrenal mass, Lymphadenopathy, Splenic hematoma, Undescended testicle (cryptorchidism)
- Abdominal and/or pelvic pain
- Combined pelvic pain with abdominal pain criteria in new “abdominal and/or pelvic pain” indication
- Required ultrasound or colonoscopy for select adult patients based on clinical scenario
- Ultrasound-first approach for pediatric abdominal and pelvic pain
- Added requirement to exclude DVT prior to abdominopelvic imaging
- Added new indications for diagnosis, management, and surveillance of splenic incidentalomas following the ACR White Paper (previously reviewed against “tumor, not otherwise specified”)
- Separated criteria for solid and cystic pancreatic masses
- Defined follow up intervals for cystic pancreatic masses
- Added criteria for MR elastography
- Limited requirement for upper endoscopy to patients with relevant symptoms
- New requirement for fecal calprotectin or CRP to differentiate IBS from IBD
- Incorporated Intussusception (pediatric only), and Ischemic bowel
- Moved this indication to Oncologic Imaging Guideline

Retired policies:
Effective January 1, 2021: Ingestible pH and Pressure Capsule (045)
Effective January 1, 2021: Transanal Radiofrequency Treatment of Fecal Incontinence (309)
Effective May 1, 2021: Vagus Nerve Blocking Therapy for Treatment of Obesity (644)
Effective October 1, 2021: Alpha-Fetoprotein-L3 for Detection of Liver Cancer (504)

Policies with No Coverage Updates
1. Allogeneic Pancreas Transplant (328)
2. Analysis of Human DNA in Stool Samples as a Technique for Colorectal Cancer Screening (557)
3. Biofeedback as a Treatment of Fecal Incontinence or Constipation (308)
4. Chromoendoscopy as an Adjunct to Colonoscopy (904)
5. Confocal Laser Endomicroscopy (618)
6. Cryosurgical Ablation of Primary or Metastatic Liver Tumors (633)
7. Dificid (700)
8. Endoscopic Retrograde Cholangiopancreatography - ECRP - with Laser or Electrohydraulic Lithotripsy (209)
9. Erythropoietin, Recombinant Human, Epoetin Alpha (Epogen® & Procrit®), Darbepoetin Alpha (Aranesp®) (262)
10. Esophageal pH Monitoring (069)
11. Extracorporeal Photopheresis (248)
12. Fecal Analysis in the Diagnosis of Intestinal Dysbiosis (556)
13. Fecal Calprotectin Testing (329)
14. Gastric Electrical Stimulation (636)
15. Heart-Lung Transplantation (269)
16. Home Total Parenteral Nutrition (TPN) (296)
17. Hyperbaric Oxygen Pressurization (HBO) (653)
18. Immune cell Function Assay in Solid Organ transplantation (182)
19. In Vivo Analysis of Colorectal Polyps (521)
20. Interferons Alpha and Gamma (052)
21. Islet Transplantation (324)
22. Isolated Small Bowel Transplant (631)
23. Liver Transplant and Combined Liver-Kidney Transplant (198)
24. Lung and Lobar Lung Transplantation (015)
25. Medical and Surgical Management of Obesity including Anorexiants (379)
26. Monitored Anesthesia Care (MAC) (154)
27. Noninvasive Techniques for the Evaluation and Monitoring of Patients with Chronic Liver Disease (921)
29. Nutrient/Nutritional Panel Testing (745)
30. Oncologic Applications of Photodynamic Therapy, Including Barrett’s Esophagus (454)
31. Peroral Endoscopic Myotomy for Treatment of Esophageal Achalasia (451)
32. Plasma Exchange (466)
33. Plugs for Fistula Repair (528)
34. Proton Pump Inhibitors (030)
35. Renal (Kidney) Transplantation (196)
36. Serological Diagnosis of Celiac Disease (138)
37. Serum Antibodies for the Diagnosis of Inflammatory Bowel Disease (551)
38. Special Foods: Special Infant Formula, Enteral Formula, Ketogenic Diet for Seizures and Formula Infusion Pumps (304)
39. Surgical and Transesophageal Endoscopic Procedures to Treat Gastroesophageal Reflux Disease (920)
40. Small Bowel-Liver and Multivisceral Transplant (632)
41. Transanal Endoscopic Microsurgery (TEMS) (200)
42. Transanal Radiofrequency Treatment of Fecal Incontinence (309)
43. Transcatheter Arterial Chemoembolization to Treat Primary or Metastatic Liver Malignancies (634)
44. Wireless Capsule Endoscopy as a Diagnostic Technique in Disorders of the Small Bowel, Esophagus, and Colon (185)
45. Whole Body Computed Tomography Scan as a Screening Test (447)
46. Medical Technology Assessment Investigational (Non-Covered) Services List (400)
